

# Introduction to Collaborative Problem Solving<sup>®</sup> for Educators

## Develop a Behavioral Growth Mindset!

Collaborative Problem Solving<sup>®</sup> (CPS) is an entirely different way of understanding and meeting the needs of all students, including those with social, emotional, and behavioral challenges. Join us to learn how to identify what's really causing challenging behavior and unmet expectations and how to partner with your students to develop solutions.

The CPS approach aligns with CASEL's 5 core competencies, integrates with MTSS frameworks, PBIS, and restorative practices, is evidence-based, neuro-biologically and trauma-informed, and child and family-centered.

## About the Course

This course introduces the philosophy of Collaborative Problem Solving<sup>®</sup> (CPS), an approach that helps young people meet expectations, reduces concerning behavior, builds skills, strengthens relationships with adults, and lowers teacher stress.

Join us to:

- Understand what really causes challenging behavior or unmet expectations in students.
- Discover the limitations of motivational approaches as a solution to unwanted behavior.
- Learn three ways to respond to concerning behavior and the best times to use them.
- See how the approach can positively change interactions and outcomes between educators and students.

This introductory, self-paced course will take approximately 2 hours to complete and provides a Certificate of Completion.
